Our vision in SeiCom is to be the first choice partner for ambitious customers by offering the highest quality, delivery performance, flexibility and know-how on the market.

Our product range includes window, door and facade solutions, which are made of PVC, wood and aluminium material. This flexibility in profile materials allows us to focus on finding the right solution for our customer needs. Whether the focus is on achieving the highest thermal insulation value or the most complex glass facade – we have the knowledge and technical solutions to accomplish this.

The story behind SeiCom

SeiCom is an Estonian capital based family business founded by two brothers, Ahti Sei and Priit Sei. SeiCom started in 2002 as a manufacturer of PVC windows and doors. Over the years SeiCom has developed constantly and become the only company in Estonia to offer all window and door solutions – PVC, wood, wood-aluminium and full-aluminium.

Thanks to our team of qualified specialists, we can offer our clients a full service from drawing board to assembly. Our range of products is never ending and is constantly growing. To accomplish that, we work closely with our customers, profile manufacturers, construction companies and architects.

PVC

Comfort and simplicity

The use of PVC has been increasing rapidly in the world of windows and doors. There is a good reason for this – PVC windows and doors combine a high thermal insulation value with practicality. PVC windows and doors are long-lasting and easy to maintain. All SeiCom PVC products are available in a wide variety of decorative colors.

WOOD

Quality in traditions

Wood is a natural and sustainable material that has been used for windows and doors for centuries. Wooden windows and doors ensure a warm and cozy indoor climate. Combined with aluminum our wooden windows achieve the highest resistance against rain and sun.

ALUMINIUM

Modern glass surface

Aluminium is a strong but at the same time extremely lightweight material. Those qualities allow us to cross limits and produce even the most complex windows and facade solutions for both private and public buildings in various dimensions.

PVC

Our range of PVC products consists of three main product groups: windows, doors, and sliding doors. Three models of windows are available: common tilt and turn European type windows, traditional outwards opening Scandinavian windows, and most advanced Top Swing windows. The assortment of doors consists of inwards opening Balcony doors, outwards opening Terrace doors and a variety of Front doors. The Sliding doors come in two systems: tilt and slide and parallel slide doors. Folding doors are available in 3 or 4 door leafs. All described PVC products are available in wide range of decorative colors.

PVC EUROPEAN TYPE WINDOWS

European type windows are inwards opening windows with tilt and turn function. All our windows are fitted with micro-ventilation function. The assortment consists of four types of profile systems (SeiCom Classic, SeiCom Modern, SeiCom Premium and SeiCom SlimLine) that can be combined with three glazing options (double glass, triple glass and triple glass Energy). In addition, it is possible to choose between tempered glass, laminated glass and decorative glass. Thermal insulation value of the window depends on the combination of profile system and glass. SeiCom Premium profile is certificated for passive house standards, which combined with triple glass Energy will meet the highest expectations of energy efficiency.

PVC EUROPEAN TYPE WINDOWS

Glazing	Double glazed	Triple glazed	Triple glazed Energy
Argon gas-filled	Yes	Yes (2x)	Yes (2x)
Selective glass	External glass	Middle glass	Internal and external glass
Glazing spacer	Aluminum	Double Aluminium	Chromatec Ultra

SeiCom Classic

Construction depth 74 mm	U-value 1.3 W(m²K)	U-value 0.86 W(m²K)	U-value 0.78 W(m²K)
Double gasket Siegenia hardware ≤ max 47 dB			

SeiCom Modern

Construction depth 74 mm	U-value 1.2 W(m²K)	U-value 0.85 W(m²K)	U-value 0.78 W(m²K)
Triple gasket Siegenia hardware ≤ max 47 dB			

SeiCom Premium

Construction depth 82.5 mm	—	U-value 0.81 W(m²K)	U-value 0.73 W(m²K)
Triple gasket Siegenia hardware ≤ max 48 dB			

The U-value calculation is based on closed window unit size 1230x1480 mm

PVC SCANDINAVIAN TYPE WINDOWS

Also known as the Dannenbrog windows, these are an outwards opening side-hung or top-hung windows with the option of a traditional hook system or modern handle system with a wind lock option. The PVC Nordic Design + profile has a traditional look and is at the same time durable and easy to maintain. Our Nordic Design + profile system can be combined with many glazing options (double glass, triple glass and triple glass Energy).

Glazing	Double glazed	Triple glazed	Triple glazed Energy
Argon gas-filled	Yes	Yes (2x)	Yes (2x)
Selective glass	External glass	Middle glass	Internal and external glass
Glazing spacer	Aluminum	Double Aluminium	Chromatec Ultra

Nordic Design +

Construction depth 120 mm	U-value 1.3 W(m²K)	U-value 1.0 W(m²K)	U-value 0.94 W(m²K)
Double gasket IPA / Siegenia hardware ☞ max 40 dB			

The U-value calculation is based on closed window unit size 1230x1480 mm

- Outwards opening
- Break stay optional

PVC TOP SWING TYPE WINDOWS

Our Top Swing windows are fitted with ASSA/ABLOY hinge system allowing the window to be turned 180 degrees. This function is especially good for cleaning purpose. The combination of top swing functionality and PVC makes our windows most practical and easy to maintain. The Nordic Design + profile system can be combined with majority of glazing options (double glass, triple glass and triple glass Energy).

PVC TOP SWING TYPE WINDOWS

Glazing	Double glazed	Triple glazed	Triple glazed Energy
Argon gas-filled	Yes	Yes (2x)	Yes (2x)
Selective glass	External glass	Middle glass	Internal and external glass
Glazing spacer	Aluminum	Double Aluminium	Chromatec Ultra

Construction depth 120 mm	U-value 1.3 W(m²K)	U-value 1.0 W(m²K)	U-value 0.93 W(m²K)
Double gasket ASSA / ABLOY / Siegenia hardware ≤ max 40 dB			

The U-value calculation is based on closed window unit size 980x980 mm

PVC BALCONY DOORS

Our Balcony doors are based on SeiCom Classic, SeiCom Premium and SeiCom Modern profiles, which can be combined with many glazing options. The Balcony doors are inwards opening doors including tilt and turn mechanism. The handle of the door is only on the inside. It is possible to choose between low aluminium or regular PVC threshold.

PVC WINDOW AND DOOR FINISHING OPTIONS

PVC decorative foils

PVC decorative foils are available in plain (matt or smooth) and wood grain appearance. Windows with decor foils offer all the positive properties of modern PVC windows and doors. Decorative foils can be used to finish the inside and outside of the windows and doors. We offer a choice of more than 50 different colors of decorative foil.

Real Wood foil

Real Wood foil

Standard Wood Decor foil

The Real Wood foil is a further developed foil to give the windows a more wood-like appearance. The Real Wood foils have an attractive embossing and do not shimmer as much as standard wood decor foils. Those features give the PVC window the natural appearance of real wood. The Real Wood foils are available in several standard colors.

Acrylcolor

Acrylcolor – the acrylic color layer is twice as hard as the regular white surface of PVC windows. It is highly scratch and weather effect resistant. The semi-matt, smooth and non-porous acrylcolor surface is insensitive to accumulations of dust and dirt. The acrylcolor layer does not separate and crack. Acrylcolor PVC windows and doors require virtually no maintenance nor laborious repainting and are extremely easy to care for. Acrylcolor is available only for the exterior of the windows and doors. Acrylcolor finish is available in more than 60 colours.

WOOD

SeiCom range of wooden products consists of four main product groups: windows, doors, sliding doors and folding doors which all are available in SeiCom Classic (78 mm) and SeiCom Premium (92 mm) frame qualities. Our wooden windows and doors are made from engineered timber: pine (finger jointed and laminated), oak (laminated) and meranti (laminated). Engineered timber improves the thermal insulation value as well as improves the strength of the frame, making it less receptive to any kind of twisting or warping. Both frames are available with an aluminum cladding option making the windows and doors especially weather resistant. All described windows and doors are available in a wide range of stains or paints. The inside and outside of the frame can be finished in different treatments.

WOODEN FINISHING OPTIONS

SeiCom is very proud to offer hand finished wooden windows and doors. The windows and doors are dip treated against blue stain and mould. Sanded two times – before and after the base layer of paint is applied. The final finish coating is applied by hand and all joints are filled with special filler to prevent any kind of moisture penetration. For the final finishing we offer the full classic RAL color chart and dozens of wood stains to choose from. Of course the interior and exterior can have a different color or stain. This versatile choice of finishes offers flexibility for even the most demanding interior design.

RAL color chart

Wood and aluminum clad windows and doors can be ordered in all colors from RAL color chart.

Selection of stains

We offer a wide range of wood stains for windows and doors.

ALUMINIUM

SeiCom aluminium systems allow you to fabricate many different types of windows, doors, internal partition walls and facade solutions. These can depend on the scope and specific requirements for functionality, aesthetics, thermal insulation, burglary resistance, smoke control or fire resistance. These include both structures with no thermal insulation and solutions based on thermally insulated profiles. All SeiCom aluminium products are based on Aluprof SA systems.

ALUMINIUM WINDOW AND DOOR SYSTEMS

MB-79N

Construction depth
70 mm

U-value from
0.64
W(m²K)

The MB-79N is cutting-edge, budget-friendly window and door system. Introduced with a view to meeting heightened thermal insulation requirements, it is employed for a broad range of structures, including fixed, turn, tilt, tilt and turn, and tilt-and-slide windows, single and double exterior doors and shop windowtype solutions with doors.

MB-86N

Construction depth
77 mm

U-value from
0.62
W(m²K)

The highly efficient MB-86N window and door system makes it possible to satisfy the diverse needs of users. There are two versions of the profiles, the ST and the SI, which are designed to meet different thermal energy efficiency requirements. The system provides superb performance parameters.

MB-104

Construction depth
95 mm

U-value from
0.53
W(m²K)

The MB-104 Passive is a thermal break-equipped window & door system that provides the highest thermal insulation performance and meets all the requirements for passive building components.

PASSIVE HOUSE

Panel doors

Construction depth
77/95 mm

U-value from
0.63
W(m²K)

Our range includes panel doors based on the MB-86 and MB-104 system. This is a visually attractive and at the same time technologically advanced product. Due to its design solutions and the rich diversity of colors for door fill, it can be, not only the functional and durable entrance into your home, but also its mark and decoration.

PASSIVE HOUSE

MB-45

Construction depth
45 mm

MB-45 is a modern aluminium system intended for designing elements of architectural exterior and interior enclosures that do not require thermal insulation, e.g. various types of partition walls, windows, manual and automatic sliding doors, swing doors, vestibules, display windows, ticket box offices, showcases and spatial structures.

FIRE-RATED ALUMINIUM WINDOW AND DOOR SYSTEMS

A wide range of systems facilitate a variety of structural elements that are responsible for “fire protection zones” in buildings and provide the right conditions for evacuation of its occupants. These solutions include window, wall and door system options. The fire resistance performance of these solutions, depending on the project requirements, are available in a variety of classes, from EI 30 to EI 120. An important feature of fire rated solutions is their ability to interface with each other, one system to the next, whilst maintaining the necessary fire resistance.

MB-86EI

Construction depth
86 mm

Fire rated
EI 30

U-value from
0.86
W(m²K)

MB-86EI is used for fabrication of EI30 fire-rated openable windows and doors to EN 13501- 2+A1. MB-86EI is based on MB-86 system and has excellent thermal, sound reduction, water retardant and air leakage performances. The MB-86EI combines the advantages of a classic window system with the properties of a fire partition walling – the construction meets all the requirements of the applicable regulations and standards, especially regarding energy saving and environmental protection, while ensuring proper fire safety.

MB-60E EI

Construction depth
60 mm

Fire rated
EI 30

MB-60E EI enables the fabrication of fire-resisting internal or exterior, single or double leaf doors. It also enables the fabrication of “technical windows” and fire retardant partitions. MB-60E EI-based constructions are classified EI15 or EI30 to PN-EN 13501-2+A1:2010.

MB-78EI

Construction depth
78 mm

Fire rated
EI 30–EI 90

The MB-78EI fire partition system is intended for producing internal or external fire partition walls with single- or double-leaf doors with a fire retardant class of EI 15, EI 30, EI 45, EI 60 or EI 90, according to the PN-EN 13501-2+A1:2010 norm.

MB-118EI

Construction depth
118 mm

Low Threshold,
wheelchair accessible

Fire rated
EI 30–EI 120

The MB-118EI system is based on MB-78EI and is used to fabricate EI120-fire rated structures. The system has been developed on the basis of a five chamber insulated aluminium profile, with a front to back depth of 118 mm. The inner chamber profiles, as well as insulating space between them, are filled with fire insulation elements. On the outer surfaces there are expanding tapes which are additionally mounted and the whole structure is completed by steel accessories components, joining both sides of the profiles. Thanks to its symmetrical composition, the structures that are made of it remain fire resistant in EI 120 class, both exposed to fire from the outside and the inside.

SMOKE EXHAUST WINDOWS AND FLAPS

Certificates

Certificates confirming compliance with the requirements of the EN 12101-2: 2003 standard.

The smoke exhaust windows and flaps play a particular role in ensuring safety and comfort for the people staying in the building. When properly selected, they are the elements of gravity ventilation, and when necessary they can help to quickly get rid of smoke and toxic vapours which may be dangerous for health and life. The offer for these products is characterised by the diversity of solutions so they can be used in an individual development, as well as elements integrated with aluminium facades or roof glazed panels.

ALUMINIUM SLIDING AND FOLDING DOOR SYSTEMS

MB-77HS sliding door system

Construction depth
174 mm
Optional low threshold
(wheelchair accessible)

U-value from
0.84
W(m²K)

The MB-77HS "Lift & Slide" door product is an ideal solution for connecting interior space rooms or conservatories with the outside balcony, terrace or garden area.

MB-86 FOLD folding door system

Construction depth
86 mm
Optional low threshold
(wheelchair accessible)

U-value from
1.5
W(m²K)

Exterior folding doors offer greater flexibility to their users. They enable us to use weather conditions to our advantage and virtually eliminate the barrier between the interior space and its surroundings. With its excellent technical parameters, MB-86 FOLD LINE is a very convenient solution that enables the fabrication of large-dimension structures. Folding doors can be opened both outwards and inwards and its leaves can be freely configured. It is a modern product, designed to meet the high demands of users, architects and owners.

ALUMINIUM INTERNAL WALL SYSTEMS

MB-45 OFFICE

Construction depth
45 mm

The MB-45 OFFICE fixed and door equipped partitioning system has been designed to fabricate internal partition walls whose distinguishing feature is that a tempered glass pane can be its structural component. Due to its versatility and wide application possibilities, the MB-45 OFFICE system is dedicated to the fabrication of lightweight, yet solid walls in meeting rooms and office spaces with “clearly marked” door. The elements of this system allow to fabricate fixed partition walls and all-glass door leaves for hinged and swinging-type doors. MB-45 OFFICE is available in a wide range of colors- RAL and wood-like ADEC.

MB-HARMONY

Construction depth
45 mm
«» max 38 dB

The MB-HARMONY is a single-glazed system which is part of the MB-HARMONY OFFICE glass partition series. Geometrically light and easy to assemble, it requires no special construction tools. It is designed to be combined with tempered glass or with 10-12 mm acoustic glass. The system is ideal for typical office spaces, even those with acoustic requirements above the norms.

ALUMINIUM FACADE SYSTEMS

Our facade systems are used to fabricate glass facades of buildings such as banks, hotels, administration offices, office buildings, car showrooms, gyms, etc. They are also used for multiple spatial structures and roof glazing that light the interior and create a suitable atmosphere and comfort to its users. They are an excellent tool for shaping contemporary architecture and implementing designers' bold visions. The most popular among these products are the mullion-transom systems.

MB-SR50N HI+

PASSIVE HOUSE

U-value
from (frame)
0.72
W(m²K)

This system allows facades to be constructed with visible narrow dividing lines while ensuring the durability and strength of the structure. The wide offer of profiles enables architects and designers to realise even the most enterprising ideas for aluminium and glass structures. To obtain the optimum thermal and acoustic insulation and facilitate mounting in the MB-SR50N HI+ system facade, the PE insulator is used, as it provides a very good thermal insulation ((Uf) from 0,59 W/m²K) and its shape ensures proper screw driving when glazing the facade.

MB-SR50N Efekt

U-value
from (frame)
1.1
W(m²K)

MB-SR50N EFEKT is a facade solution that provides a uniform external appearance of a smooth glass wall divided by the structure of vertical and horizontal lines of 2 cm, thanks to the use of a special system for fixing panes to mullions and transoms. The gaps between glass fields of the facade are filled with a special silicon binder to ensure high tightness of the construction and enhance its insulation properties.

MB-SR50N A

U-value
from (frame)
0.72
W(m²K)

This overlapping system has been created on the basis of the MB-SR50N mullion and transom wall. The system allows to combine construction materials having different characteristics and looking different from the outside and inside. External aluminium elements ensure durable protection of the internal skeletal construction against weather conditions. Two types of materials can be used for the building of the load-bearing structure: wooden constructional profiles give the interior a specific character due to the natural beauty of wood, which creates a pleasant and cosy atmosphere, while steel profiles may be required for the execution of the industrial-type of decor or when there are large distances between supports.

MB-SR50N EI

Fire rated
EI 30 – EI 60

U-value
from (frame)
1.8
W(m²K)

The mullion-transom system MB-SR50N EI is intended for the construction and execution of light fire resistant curtain and filling walls of the fire resistance class EI15, EI30, EI45, EI60 according to the standards PN-EN 1364-3 and PN-EN 1364-1 as well as glazed roof coverings of the fire resistance class RE30 as per the standard PN-EN 1365-2. The system has been classified as non-fire-propagating (NFP).

MB-SR50N EI EFEKT

Fire rated
EI 30 – EI 60

U-value
from (frame)
1.1
W(m²K)

Due to the application of a special system of fitting glass panels to mullions and transoms, a smooth surface is obtained on the outside, divided by a grid of vertical and horizontal lines 24 mm wide. The facade executed in this system ensures excellent performance characteristics and thanks to the possibility of application of two-chamber glazing - very high thermal insulation performance is achieved, which is, in view of the world-wide trend oriented towards reduction in energy consumption, one of the fundamental criteria of assessment of curtain walls.

A load bearing structure consists of vertical (mullions) and horizontal (transoms) aluminium profiles of box section, appropriately joined with each other and accessories with the function of sealing and connecting. The assortment of transoms falls into two groups of profiles (1 & 2) featuring different resistance parameters. Load-bearing profiles, which are flush on the inside of the facade feature fixed width of 50mm. The facade is mounted onto the building by means of a system of consoles, meeting the intended use and featuring appropriate load capacity.

GLAZING

Glass plays an important role in the whole window and door solution. Whether it is the cost of the total unit or the thermal insulation value of the house – choosing the right glass can make a big difference. In our assortment we offer four types of glass (double glazing, triple glazing, triple glazing Energy and additionally Energy + glass). Other types of glazings are available on request. All our glazing options are available as tempered or security glass. For more privacy, there are different decorative finishing options.

SeiCom glazing

SeiCom standard Double glass consists of two layers of 4 mm glass with argon gas filled gap in between. The internal layer of a glass is selective glass. The glazing unit spacer bar is made out of aluminium.

U-value of the glass unit: 1,1 W(m²K) Sun protection factor (g): 0,64

SeiCom standard Triple glass consists of three layers of 4 mm glass with argon gas filled gaps in between. The inner layers of external glasses are selective. The glazing unit spacer bar is made out of aluminium.

U-value of the glass unit: 0,55 W(m²K) Sun protection factor (g): 0,53

SeiCom standard Energy glass also consists of three layers of 4 mm glass with argon gas filled gaps in between and the inner layers of external glasses are selective. But unlike the standard triple glass, the glazing unit spacer bar is **Chromatec Ultra**, which is for better thermal insulation and vapour barrier. Selective glass with this spacer bar offers great energy-saving features, which are used to reduce heat loss. It has multiple advantages: there are no cold areas around the window, technology of the glass reduces incidence of condensation and also lets maximum daylight into the room.

U-value of the glass unit: 0,52 W(m²K) Sun protection factor (g): 0,52

SeiCom Energy + glass is a step forward in the world of glass. It has all the excellent properties of Energy glass, but development in glass itself allows the heating costs to be even more lower. Thanks to advanced technology, it is the best solution for the customer, who desires maximum energy efficiency and well-being.

SeiCom Energy+ glass solar protection factor (g) can be 0,23...0,39.

The g-value is a measure of the amount of solar heat that can pass through glass. The lower the g-value, the more effective the protection against solar energy entering the room.

Tempered glass

Tempered glass is a type of safety glass where the strength is increased by thermal treatment. Such treatment also causes the glass, when broken, to crumble into small granular chunks with blunt edges. The granular chunks are less likely to cause injury.

Laminated glass

Laminated glass, also known as security glass is comprised of two sheets of glass bonded together with one or more interlayers of polyvinyl butyral (PVB) film. If it should break, the glass will tend to remain in its frame.

Sun protection glass

The sun protection glass has high-tech coatings, which provide maximum sun protection, but at the same time it has high natural daylight transmission. The higher the sun protection factor, the lower the cost of the room conditioning, as the room does not overheat. With this advantage we can offer our customers a feeling of well-being throughout the day. The lower the g-value, the stronger the sun protection.

Tinted glass

Also known as Parsol, this glass is often chosen for design purposes, but it also has a sun protection function. Tinted glass standard colors are grey and bronze. Other colors are available on request.

Mirror effect glass

The mirror effect glass has high reflection level. It gives more private feeling. This kind of glass is, for example, chosen for offices. It can also be used as a decorative element. There are three color options for this type of glass: clear, grey and bronze.

Decorative obscure glazing

Such glasses are mainly used for privacy or just as a design element. In our assortment we use four types of obscure glass as standard – Raaka, Crepi, Kura and Satin. Other designs are available on request.

Raaka

Crepi

Kura

Satin

Decorative glazing bars

We offer a wide range of different design decorative window glazing bars for our windows and doors that can be assembled on the glass and between the glass.

OPTIONAL EXTRAS

Ventilation valves

Ventilation valves are aesthetic, compact and provide effective ventilation. They help to create a healthy indoor climate and save energy. Ventilation valves are available for all windows in SeiCom range.

Handles

SeiCom offers a wide range of aluminium handles for windows. All window handles are also available with lock and optional child lock (KISI).

Child lock (KISI)
Conventional window and balcony door handles are easy for children to operate. With the child safety device KISI window and balcony door handles can only be operated with two hands.

Insect nets for windows

SeiCom offers insect nets for inwards opening European style windows. Insect net frames are made of an aluminium profile and the net is almost invisible so it doesn't affect the look of the window or house.

Concealed hinges

SeiCom offers concealed hinges, also known as invisible hinges, for all windows. Those type of hinges are completely concealed when the window is closed, giving our windows a contemporary and modern look.

Frame extension for wooden and aluminium clad wooden windows and doors

SeiCom offers additional frame extension to match the wall thickness for all wooden and aluminium clad wooden windows and doors. This feature is especially useful on log houses.

BESPOKE WINDOWS AND DOORS

Here, at SeiCom, we are open for all kinds of bespoke size and style windows, terrace doors and balcony doors. Whether it is the complicated shape, size or function, our team of experienced specialists are always motivated to face new challenges. We work closely together with our suppliers of profiles and hardware to solve even the most demanding projects.
